

Crew name	Meta Minds	How many crew members?	☒ 2 ☐ 4
System Name	UniAssist Portal		
System Users	Students		
Platform	☐ Desktop ☐ Mobile (Android only) ☒ Web system ☐ Hybrid (please specify i.e. website combined with a desktop or mobile interface) Click or tap here to enter proposed hybrid platform		
Briefly describe the system objective (project idea, problem to be solved)			
The objective of UniAssist Portal is to develop a centralized online platform designed to support students by addressing common challenges they face during their academic journey. Many students struggle with finding affordable accommodation, accessing accurate NSFAS information, locating scholarships and bursaries, and managing mental health stress. These challenges often exist in separate systems, making it difficult for students to access reliable information quickly and efficiently. The system aims to solve this problem by integrating student housing listings, scholarship search functionality, NSFAS guidance support, and basic mental wellness tools into one user-friendly website. By bringing these essential services together, the platform reduces student stress, improves access to opportunities, and promotes academic success. The goal is to create a practical, accessible, and supportive digital environment that empowers students to manage both their academic and personal needs in one place.			
List of entity classes (problem domain classes) – What data needs to be stored			
User, Student, Faculty administrator, Student housing admin, financial aid, Issues, health department			
List of essential use cases – what is the basic functionality <i>Login / Logout NOT to be listed!!!</i>			
Submit issue, update details, check progress, reply student, view issue, update issue status, Authentication			
Planned Implementation Tools (this could change once implementation starts)			
Relational Database ☒ MS Access ☐ MySQL ☐ SQL Server ☐ SQLite			
Development Environment (may select multiple) ☒ C# ☐ JAVA ☐ Android ☒ HTML ☒ CSS ☒ JavaScript ☒ Other (ASP.NET)			

For official Use – DO NOT COMPLETE Proposal Review

Proposal Outcome				25	
Project Scope in line with Dev Crew Size ☐ Yes ☐ No				Approved	Conditionally Approved
Rejected					

Criteria & Rating	Comments						
Problem Overview Overview of the proposed system is detailed enough to make informed decision about feasibility of project (no reading between the lines) Lacks detail Clear Overview <table border="1" style="width: 100%; text-align: center; margin-top: 5px;"> <tr> <td style="width: 16.6%;">0</td> <td style="width: 16.6%;">2</td> <td style="width: 16.6%;">4</td> <td style="width: 16.6%;">6</td> <td style="width: 16.6%;">8</td> <td style="width: 16.6%;">10</td> </tr> </table>	0	2	4	6	8	10	
0	2	4	6	8	10		
Functionality & Reporting Sufficient number of create, report, update and delete (CRUD) use cases There must be evidence of some underlying computation/intelligence on data in addition to data retrieval (for reporting purposes specifically) Too few Sufficient <table border="1" style="width: 100%; text-align: center; margin-top: 5px;"> <tr> <td style="width: 16.6%;">0</td> <td style="width: 16.6%;">1</td> <td style="width: 16.6%;">2</td> <td style="width: 16.6%;">3</td> <td style="width: 16.6%;">4</td> <td style="width: 16.6%;">5</td> </tr> </table>	0	1	2	3	4	5	
0	1	2	3	4	5		
Data Support Sufficient amount of domain classes to map onto scope of project Lack of data Sufficient data <table border="1" style="width: 100%; text-align: center; margin-top: 5px;"> <tr> <td style="width: 16.6%;">0</td> <td style="width: 16.6%;">1</td> <td style="width: 16.6%;">2</td> <td style="width: 16.6%;">3</td> <td style="width: 16.6%;">4</td> <td style="width: 16.6%;">5</td> </tr> </table>	0	1	2	3	4	5	
0	1	2	3	4	5		
Planned Implementation Tools IDE should match the type of system to be implemented i.e. ASP for WEB No Yes <table border="1" style="width: 100%; text-align: center; margin-top: 5px;"> <tr> <td style="width: 33.3%;">0</td> <td style="width: 33.3%;">1</td> <td style="width: 33.3%;">2</td> </tr> </table>	0	1	2

Innovation / Originality Novel idea - if a rehash of a previous system, then there needs to be enough added features Lacks originality Innovative <table border="1" style="width: 100%; text-align: center; margin-top: 5px;"> <tr> <td style="width: 25%;">0</td> <td style="width: 25%;">1</td> <td style="width: 25%;">2</td> <td style="width: 25%;">3</td> </tr> </table>	0	1	2	3
